 TITLE : FOLDING CELLPHONE

図2の折りたたみ携帯電話の分解斜視図

ABSTRACT : PROBLEM TO BE SOLVED: To improve operability when folding in a folding cellphone, automatically openable by button operation.

SOLUTION: This folding cellphone has an operating key side case 51 having operating keys, a display part side case 52 having a display part, and a hinge 53 for connecting the operating key side case 51 and the display part side case 52. A damper module 82 is built in the hinge 53. The damper module 82 has an oil damper unit 90 fixed to the display part side case 52, and a one-way clutch unit 100 fixed to the operating key side case 51. The one-way clutch unit 100 allows the oil damper unit 90 to function when the display part side case 52 is rotated in the opening direction, while impeding the function of the oil damper unit 90 when the display part side case 52 is rotated in the folding direction.
